

Who do these affect?

The Source
for Critical Information and Insight™

Whether your principle driver for managing health, safety and environment is to be a good employer and neighbour, or to improve financial performance, or to avoid prosecution and damage to your company's reputation, your obligations to manage health, safety and environmental performance are clear.

Although the recent Corporate Manslaughter and Homicide Act adds to the legislative framework the management of Health and Safety at Work Regulations state that Health and Safety must be managed by an adequate number of competent people. With the development also of even more rigorous regimes for environmental protection it is even more important for us to manage our processes more effectively and efficiently... in addition we now have to tackle climate change!

In essence the competence of your health, safety and environmental (H,S&E) professional is based on appropriate skills, experience and knowledge – including knowledge of current regulations, guidance, best practice and standards. This knowledge base is extensive, relatively complex and in a constant state of change.

“ ill health and injury cost £30 billion a year * ”

What should you think about?

- What is your commitment to health, safety & environmental (H,S&E) issues?
- Is it your intention to continuously improve your H,S&E performance
- Are your H,S&E mechanisms regularly reviewed?
- Do your H,S&E professionals have access to the information they need?

Health, Safety and Environmental issues can affect more than just you and your organisation....

The Occupational Health & Safety Information Service (OHSIS) from IHS is specifically designed to provide Health, Safety and Environmental professionals with the necessary H,S&E knowledge base, to keep it up-to-date, and to inform them of change.

“ 34 million UK working days lost to ill health and injury * ”

As well as the comprehensive document library OHSIS includes:

- Giving users access to important guides and training materials covering key subject areas that can be used for employee updates
- Daily Document Alert identifies new and changed documents from the 450+ publishing organisations included in the OHSIS service
- Email alerting and Hot-off-the-Press pro-actively mark up the most significant document arrivals
- Interested in a particular subject area? we keep our users up to speed with potential changes through our horizon scanning from Legislation Watch
- Giving users detail on latest prosecutions and case law summaries so you don't have to waste time searching multiple sources
- Be kept up-to-date with daily newsfeeds and a fortnightly NewsBrief to deliver current news

“ 910 serious pollution incidents were recorded affecting water, air or land * ”
